Air traffic is predicted to
double in the next 15 years

How can we ensure the
safe realization of this growth?

Effective Implementation of State Safety Oversight

WHAT WE HAVE TODAY

(Aiming for Effective Implementation of SARPs)

How we develop Standards and Recommended Practices

and work
towards its
effective
implementation

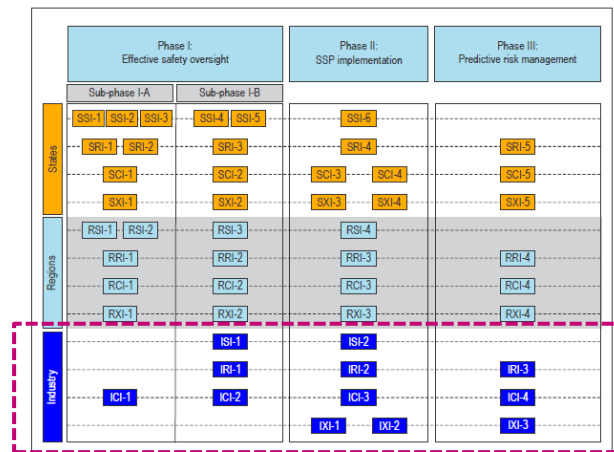

Contents of the 2017-2019 GASP

Effective safety oversight	SSP implementation	Predictive risk management
RASGs and other fora: mechanisms for sharing of safety information	RASGs: mature regional monitoring and safety management programmes	
States with EI > 60%: SSP implementation		All States: implement advanced safety oversight systems, including predictive risk management
All States: achieve 60% EI of CEs	All States: SSP implementation	
2017 (near term)	2022 (mid term)	2028 (long term)

GASP objectives and associated timelines

Evolving Safety Performance

- **iMPLEMENT** is a data-driven decision making process that:
 - Assesses the current status of aviation (**Safety Briefings**)
 - Identifies the best solutions in order to maintain or improve the aviation capability of the State (**Solution Center**)
 - Evaluates the needs of the aviation system (money, people, infrastructure) (**CAA HR Tools, PAINT/iAID, etc.**)
 - Identifies resources through existing national, regional, or global mechanisms (**ASIAP, SAFE Fund, etc.**)
 - Showcases the real added value of air transport and the socio-economic return on investment of aviation

Safety Management Assessment Tools

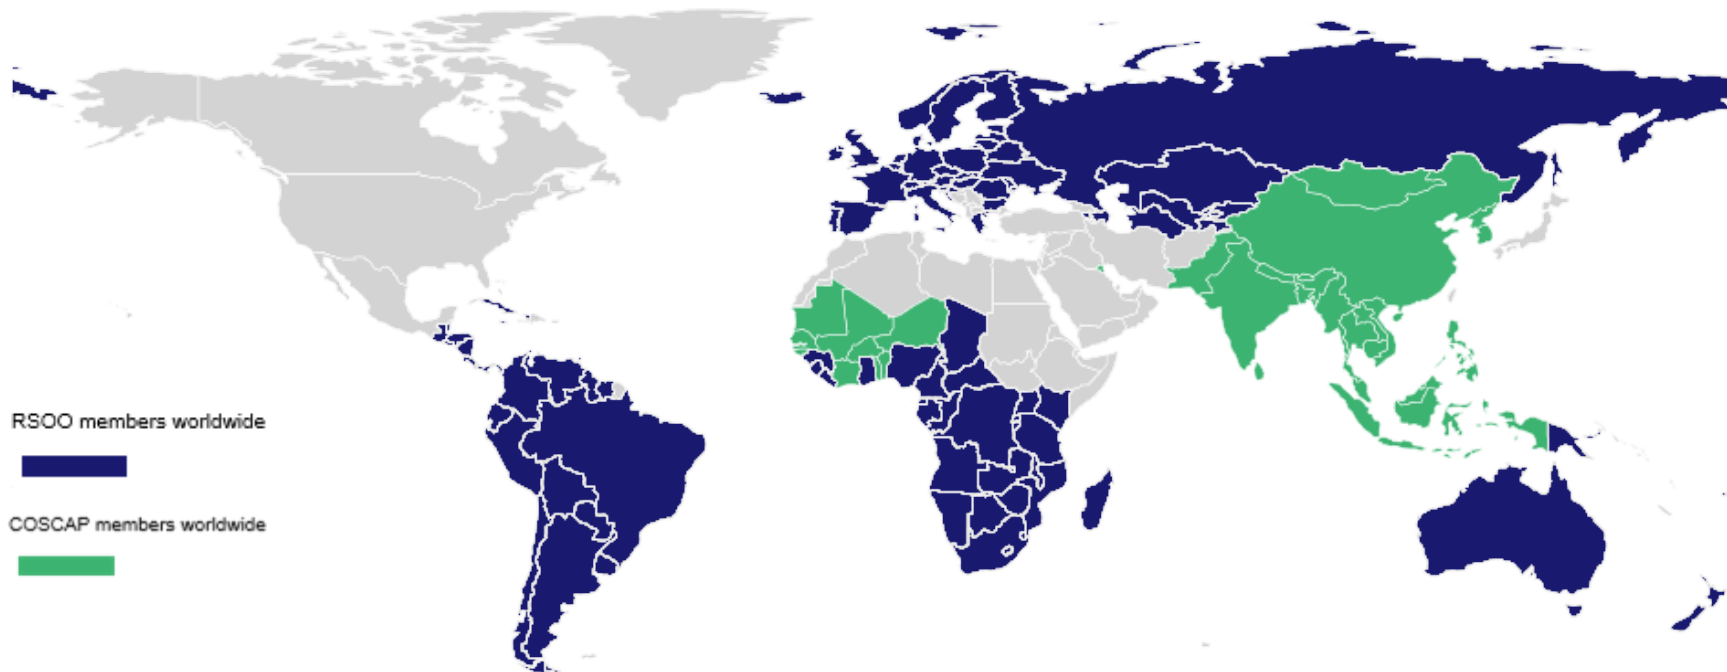

SSP Foundation Tool

now available on iSTARS

- The SSP Foundation Tool **complements the SSP Gap Analysis** and supports the establishment of a **solid safety oversight foundation** for SSP implementation
- A sub-set of 311 PQs (out of 1,099 total USOAP CMA PQs) have been linked to the foundation of an SSP. These PQs are grouped into **17 subject areas**. One of the subject areas is ***“Delegation”***.
- The tool can help States identify weaknesses in their safety oversight system even if they have an EI > 60%.
- States should prioritize and ensure these PQs are addressed when developing their SSP implementation plan.

WHAT'S NEXT ?

Proposals for Enhancement of GASP

- Global Aviation Safety *programme*
- Establishment of GASP-SG
- Focus on implementation support

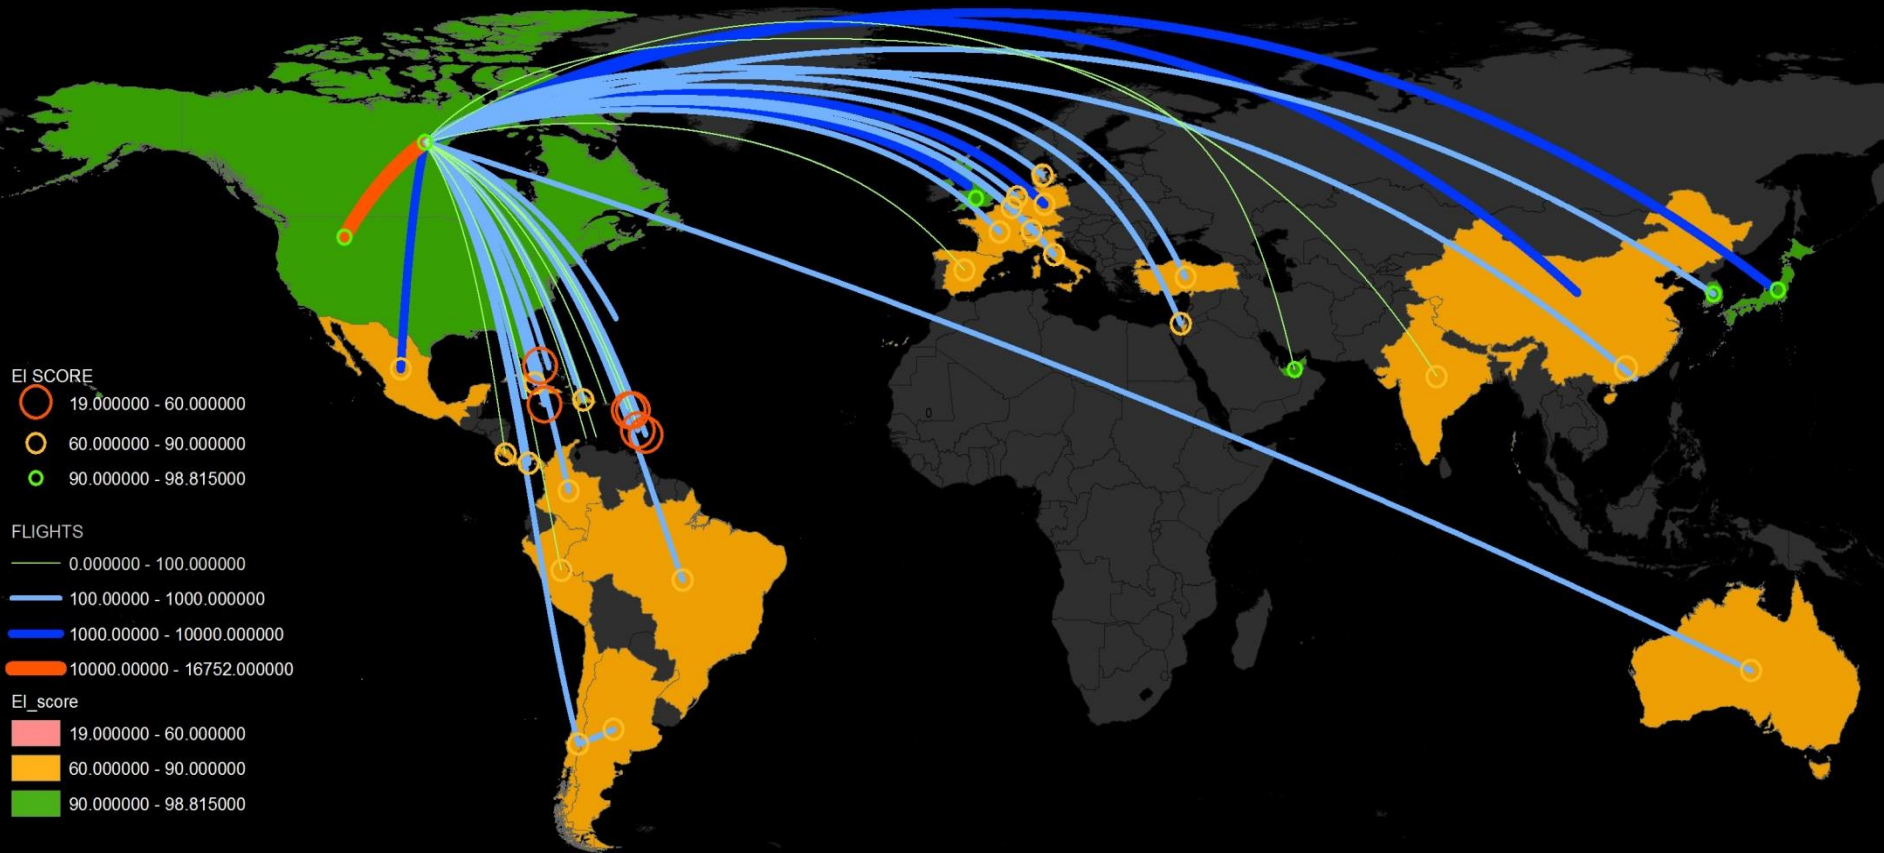

Evolution of Analysis: Safety Margins

Safety Margin

Risk-based prioritization model based on a State's Traffic and the level of Effective Implementation (EI) in the related technical areas at risk (Operations, Air Navigation, Support Functions)

Evolution of Analysis and Recognized Safety Oversight Providers

Evolution of RASGs

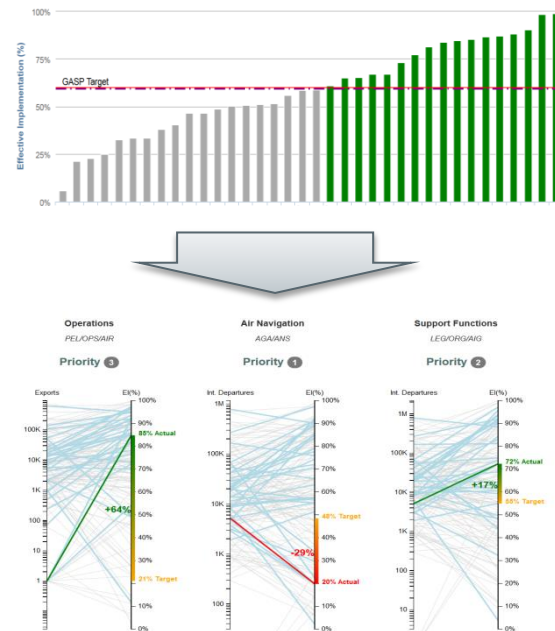

- RASGs as the **leaders for the management of regional operational risk environment**, as reflected in the Global Aviation Safety Plan (GASP)

Evolution of RASGs

- RASGs as the **leaders for the management of regional operational risk environment**, as reflected in the Global Aviation Safety Plan (GASP)
- RASGs to assist States in **identifying hazards and defining their own specific targets**
 - From 60% EI to an **acceptable Safety Margin** for each State
 - Mapping the risk

Evolution of RASGs

- RASGs as the **leaders for the management of regional operational risk environment**, as reflected in the Global Aviation Safety Plan (GASP)
- RASGs to assist States in **identifying hazards and defining their own specific targets**
 - From 60% EI to an **acceptable Safety Margin** for each State
 - Mapping the risk
- **RASGs to harmonize and avoid overlaps**
 - Between States
 - Between RASGs
